

ABSTRACT OF THE DISCLOSURE

A nested wheeled luggage assembly comprises an inner core luggage member and an outer, wraparound garment carrier hingeable about a central horizontal axis. The inner core luggage member includes two open storage shells hinged on the axis and also about their peripheries, and at least one pair of support wheels, and a retractable-extendable handle mounted on one shell whereby the core luggage member may be independently transported. An outer, wraparound garment carrier is foldable about a central horizontal axis and includes at least one pair of spaced support wheels and a telescopically retractable pull handle. The outer carrier is of equal width but substantially longer than the core luggage member, whereby the outer carrier may be folded over the core carrier in closely engaging relation. Locking straps are deployed at the periphery of the outer carrier to secure the outer carrier in a folded relation over the core carrier in a manner enabling the outer and inner carriers to be transported as a single unit.
